

Fédération de Recherche et d'Animation Plasmas à Pari

Research Projects Proposal

Rationale. PLAS@PAR supports the development of research projects within its community to foster collaboration and scientific excellence in plasma physics. For selected proposals, the federation provides financial support ranging from 2,000 to 15,000 euros. These funds are intended to cover small equipment and operational costs, support for experiments at large scale facilities, international collaborations, and outreach activities for the general public. Please note that these funds cannot be used for conference travel, personal IT equipment, support for invitations (visiting researchers), or contributions to events such as workshops and conferences. All funded activities and expenditures must be completed by the end of 2026.

The proposal may be written in either English or French and should be formatted in Arial, 10 pt. It must include the elements listed below and must not exceed three pages. The text in italic should be removed from the final version of the proposal. The three-page limit excludes the required quotations for material funding requests. The completed document should be sent in PDF format only to andrea.ciardi@obspm.fr

Submission Deadline: 16 October 2026 at 12:00 (midday)

General Information

Title of the proposal: *Enter a clear, descriptive title for the project.*

Keywords: *List between three and five keywords that best describe the research scope.*

Main Proposer: *Name, Laboratory, email, and telephone.*

Eligibility note: *PhD students and postdoctoral researchers may act as Main Proposer (PI), provided that the application includes a signed letter from their supervisor confirming their support for the project.*

Co-proposers: *Names and Laboratories of other PLAS@PAR members involved in the proposal.*

Proposal

Project description and objectives

Summarize the project briefly. Clearly state the main objectives and expected contributions of each partner.

Expected results and deadlines

Key deliverables, anticipated outcomes, a timeline with major milestones, and the potential impact of results should be described.

List of relevant publications (optional)

Highlight important publications supporting the proposal, including recent relevant work by the applicants.

Amount of requested funding and intended use

State the total amount requested, clearly detail how the funds will be allocated. Provide a justification for the requested funds.

Environmental considerations (where relevant)

Briefly indicate whether reasonable measures have been taken to limit the project's environmental impact. This may include, where applicable, reusing or sharing existing equipment, avoiding unnecessary travel or purchases, or choosing durable and repairable equipment when suitable alternatives exist. This section should only address measures that are relevant and realistically within the applicants' control. Projects will not be penalised for unavoidable environmental impacts.
